

# BEFORE ANAESTHETIC FEEDING INSTRUCTIONS

No food or milk is allowed from 8pm the night before the operation. Water is allowed until the morning, but should be removed by 8am. If a dog is taken out after it's food has been removed, then they should be kept on a lead and not allowed to eat any grass or drink from puddles etc. Cats should be kept indoors with a litter tray from 8pm the night before the operation. If you have more than one pet in the household, feed them separately to avoid the animal having the procedure scavenging.
