

BEFORE ANAESTHETIC FEEDING INSTRUCTIONS

No food or milk is allowed from 8pm the night before an anaesthetic. Water is allowed until the morning, but should be removed by 8am. If a dog is taken out after its food has been removed, they should be kept on a lead and not allowed to eat any grass or drink from puddles etc. Cats should be kept indoors with a litter tray from 8pm the night before the operation. If you have more than one pet in the household, feed them separately to avoid the animal eating when they shouldn't be.

Date/Time of procedure:

If you are bringing your animal before 9am, please ring the doorbell.
